

Analog Algorithms

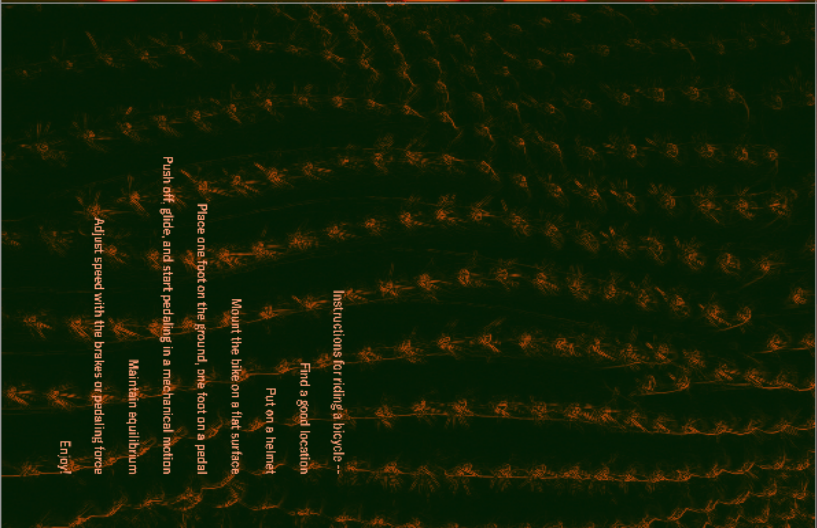

Occupy a mostly empty space.
As a group...
Imagine you are each standing on a tightrope.
And make eye contact with someone in the room.
Now, in a very straight line, begin moving forward.
Your heels touching your toes.
Retaining the eye contact with that person or another.
You must be making eye contact with someone to continue moving forward.
If not, you must stop until eye contact with someone has been reestablished.
If you run into an obstruction (the wall or an object), turn 90 degrees clockwise.
And continue straight in the new direction.
If you run into 8 person, smile at them, turn 80 degrees clockwise.
And also continue straight in the new direction.

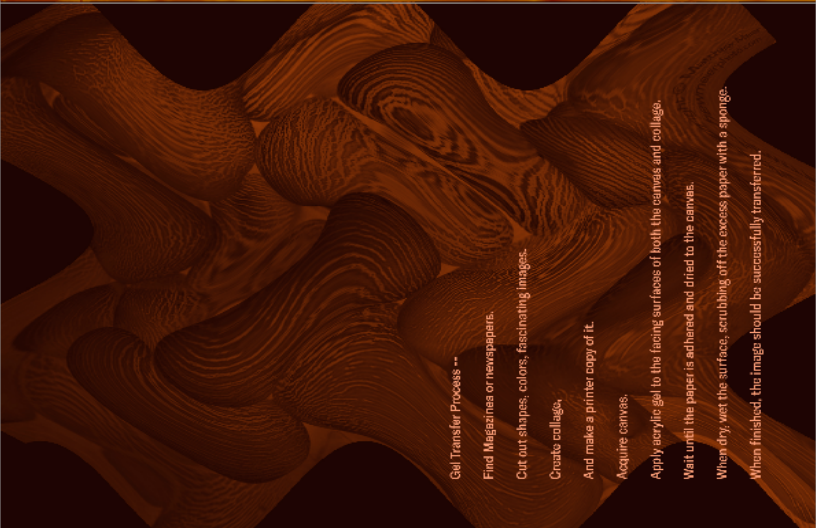

Place an 8 1/2 x 11 sheet of white paper in front of you, and acquire a writing instrument.
Get to know this piece of paper using all senses.
When you feel ready, close your eyes.
Pick up the piece of paper, and fold it hamburger style.
Then, tear along the fold.
You now have two halves - you only need one.
So, crumple up the other and throw it behind you.
On the half sheet in front of you, draw a 2.5 in. diameter circle centered on the page.
With your eyes still closed.
Fill the circle you just drew with as many triangles as possible.
Attempting not to go outside of the lines of the circle.

As you must actively communicate with someone who is not in front of you, you must use your hands to help you understand what is being said.
The linked arms may not be used for anything.
If you need your partner to help you understand what is being said, you must use your hands to help you understand what is being said.
Stay linked to each other for the rest of the piece.

Instructions for riding a bicycle --
Find a good location.
Put on a helmet.
Mount the bike on a flat surface.
Place one foot on the ground, one foot on a pedal.
Push off gently, and start pedaling in a mechanical motion.
Maintain equilibrium.
Adjust speed with the brakes or pedaling force.
Enjoy.

Get Transfer Process --
Find Magazine or newspaper article.
Cut out shapes, colors, fascinating images.
Create collage.
And make a printer copy of it.
Acquire canvas.
Apply the collage to the canvas and dried to the canvas.
Wait until the paper is adhered and dried to the canvas.
When finished, the image should be successfully transferred.
